

## Junior Software Developer

Full time - 12/18 months - WestLake Village, CA - \$15/HR

### Description of the company

An electronics manufacturer company in US is looking for a Junior software developer to join their team.

### Missions

The Junior Software Developer, using their skills in advanced problem solving and technical programming, works as a key part of our growing department and in cooperation with the Art Department, Operations, and eCommerce teams to aid in the creation and ongoing development of in-house software and web applications which improve our growing and evolving business operations. A successful candidate will be a critical thinker, a professionally kind collaborator, and proven problem solver who works well in teams and under pressure with often competing deadlines. This is an opportunity for a junior programmer to apply their existing .NET C#, SQL/Database, and web development skills in an Agile, small and entrepreneurial team environment.

## Missions

- Analyze business problems and help to design technical software solutions to those problems.
- Help to build custom software applications and web applications which may interact with order systems, customer service systems, inventory systems, and/or shipping systems.
- Help to identify and resolve bugs occurring in software and web applications.
- Analyze current software solutions and build enhancements to improve those solutions.

## Skills

- Education: BA in Computer Science or related field of study.
- 1 or 2 years proven industry experience in software development.
- Verifiable English language and writing skills.
- A deep desire to resolve complex problems with creative and organized technical solutions.
- Proficiency with cross-browser HTML and CSS programming, JavaScript, JQuery, MVC, WCF and WebForms.
- Understanding of Microsoft Windows services, web services, SOAP, or XML file exchange.
- Proficiency working within and manipulating MS SQL, MySQL, or Firebird databases.
- Must be able to understand and help generate written documentation for software solutions.
